Sprint 8 Intermediate Product Report

Broadcast Media Table Data – Tertiary Dump

Assigned to: Saiqa Nawaz

Tables: SRT21b, RadioCheckin, InfoServiceRequest, InfoContactRequests

Team: DigiClips ASU_8B_Fall 2025 TEAM

Overview

This document records the completion of Sprint 8 User Story: Broadcast Media Table Data – Tertiary Dump. The goal of this task was to generate validated SQL dumps and perform retention, trigger, and integrity checks on the SRT21b, RadioCheckin, InfoServiceRequest, and InfoContactRequests tables to preserve their current state prior to any schema cleanup or stored procedure refactoring.

1. Tasks

Task 1: Identify Tables Eligible for SQL Dumping

Review the assigned database tables and determine which tables are candidates for SQL dumps based on scope and sponsor requirements.

Actions Taken:

- All four assigned tables (SRT21b, RadioCheckin, InfoServiceRequest, InfoContactRequests) were reviewed in MySQL Workbench.
- SRT21b was identified as an active, large table with 766,198 rows of caption/transcription data. Due to its size and the presence of data older than 90 days, only the structure dump is eligible at this time. A full data dump cannot be performed until old data is cleaned up.
- RadioCheckin contains only a single row with all NULL values and is essentially empty. Structure dump was generated.
- InfoServiceRequest contains only a single row with all NULL values and is essentially empty. Structure dump was generated.
- InfoContactRequests returned 0 rows and is confirmed empty. Structure dump was generated.

Result: All four tables were reviewed and their eligibility for SQL dumping was determined. Structure dumps were generated for all tables. A full data dump for SRT21b was deferred pending retention cleanup.

Output

Action Output

#	Time	Action	Message	Duration / Fetch
4	15:41:58	SELECT * FROM dc.InfoContactRequests	0 row(s) returned	0.078 sec / 0.0
5	15:41:59	SELECT * FROM dc.SRT21b	766198 row(s) returned	0.125 sec / 122

Task 2: Classify Tables by Size and Importance

Small table (fewer than 1,000 rows) versus Large table (greater than 1,000 rows). Identify tables that are considered important and require data preservation regardless of size.

Actions Taken:

- Table sizes were reviewed prior to exporting data.
- The following classifications were determined:
  - SRT21b – Large table (766,198 rows)
  - RadioCheckin – Small table (1 row, all NULL values)
  - InfoServiceRequest – Small table (1 row, all NULL values)
  - InfoContactRequests – Small table (0 rows, confirmed empty)

Result: Table size classification was completed and used to guide dump strategy.

Task 3: Validate Data Retention Window

Verify that tables do not contain data older than the agreed 90-day retention period.

Actions Taken:

- Timestamp and date-based fields were reviewed for all assigned tables prior to finalizing SQL dumps.
- The following findings were observed:

    - SRT21b – Contains entries significantly older than 90 days. Created_at and Finished_at fields show records dating back to February 2024, which is well over a year old.
    - RadioCheckin – Contains a Finished_at DATETIME column, but the single row has a NULL value. No retention violation can be assessed on empty/null data.
    - InfoServiceRequest – Contains startDateTime and finishDateTime DATETIME columns, but the single row has all NULL values. No retention violation can be assessed.
    - InfoContactRequests – No date-based fields exist in this table. The table is empty (0 rows). Retention validation is not applicable.

Result: Retention validation was completed for all assigned tables. SRT21b contains data that violates the 90-day retention window and requires cleanup before a full data dump can be performed.

Task 4: Escalate Data Retention Violations

Notify the team of any records that violate the 90-day retention policy.

Actions Taken:

- Retention violations identified in SRT21b were escalated to the DigiClips team. The table contains 766,198 rows with Created_at timestamps dating back to February 2024.
- Communication was initiated with the DigiClips team to coordinate cleanup planning and confirm whether older records are still required for operational or reporting purposes.
- No deletion or modification of production data was performed during this sprint to avoid unintended data loss.
- RadioCheckin, InfoServiceRequest, and InfoContactRequests did not contain any data that violated the retention policy, as they are either empty or contain only NULL placeholder rows.

Result: Retention violations were successfully escalated for SRT21b. Cleanup of outdated records was deferred to a future sprint pending coordination with the DigiClips team.

Task 5: Generate SQL Data and Structure Dumps

Create SQL dumps (structure and data separately) for approved tables. Apply the standardized naming conventions.

Actions Taken:

- Structure dumps were generated for all four assigned tables.
- SRT21b – Only the structure dump was generated. Due to the table's large size (766,198 rows) and the presence of data older than the 90-day retention window, a full data dump was not feasible at this time. The data dump is deferred until old records are cleaned up.

- RadioCheckin – Structure dump was generated. The table contains only a single NULL row, so no meaningful data dump was produced.
- InfoServiceRequest – Structure dump was generated. The table contains only a single NULL row, so no meaningful data dump was produced.
- InfoContactRequests – Structure dump was generated. The table is confirmed empty (0 rows), so no data dump was produced.
- Files were named using the standardized convention:
    - dc_structure-dump_YYYY-MM-DD_TABLENAME_table.sql
    - dc_data-dump_YYYY-MM-DD_TABLENAME_table.sql (where applicable)

Result: Structure dumps were generated for all four tables. Data dumps were not applicable for RadioCheckin, InfoServiceRequest, and InfoContactRequests due to empty/null data. The SRT21b data dump was deferred pending retention cleanup.

dc_structure-dump_2025-03-05_SRT21b_t...	05/03/2026 15:59	SQL Source File	3 KB

Task 6: Trigger Check

Check the layout of each schema and verify that triggers exist under the triggers tab.

Actions Taken:

- The Triggers tab was inspected in MySQL Workbench for each of the four assigned tables.
- The following findings were observed:
    - SRT21b – No triggers found.
    - RadioCheckin – No triggers found.
    - InfoServiceRequest – No triggers found.
    - InfoContactRequests – No triggers found.

Result: None of the assigned tables contained triggers.

Task 7: Foreign Keys and Index Review

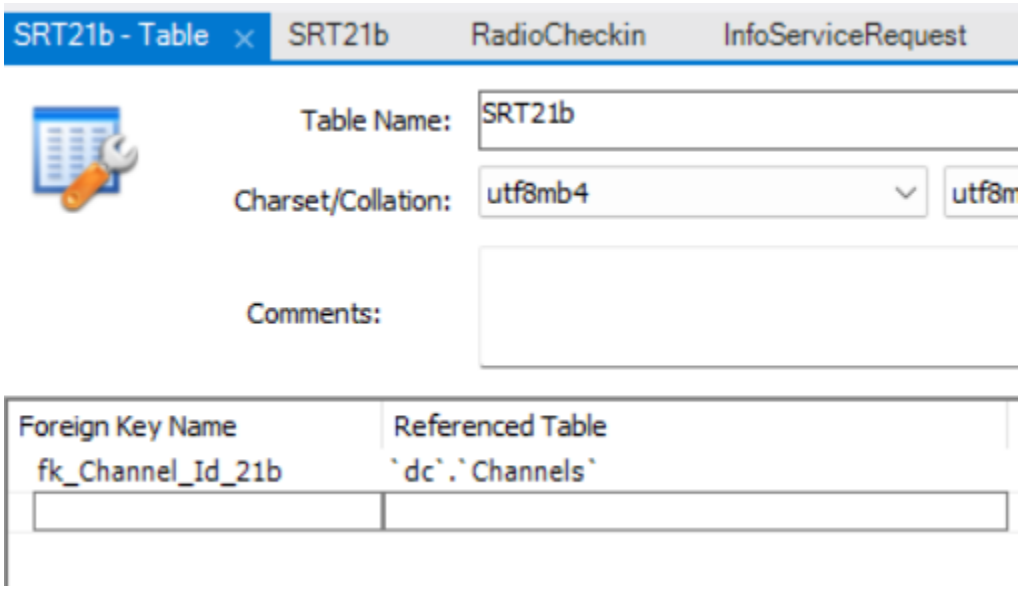
Review foreign key relationships and indexes for each assigned table to document dependencies.

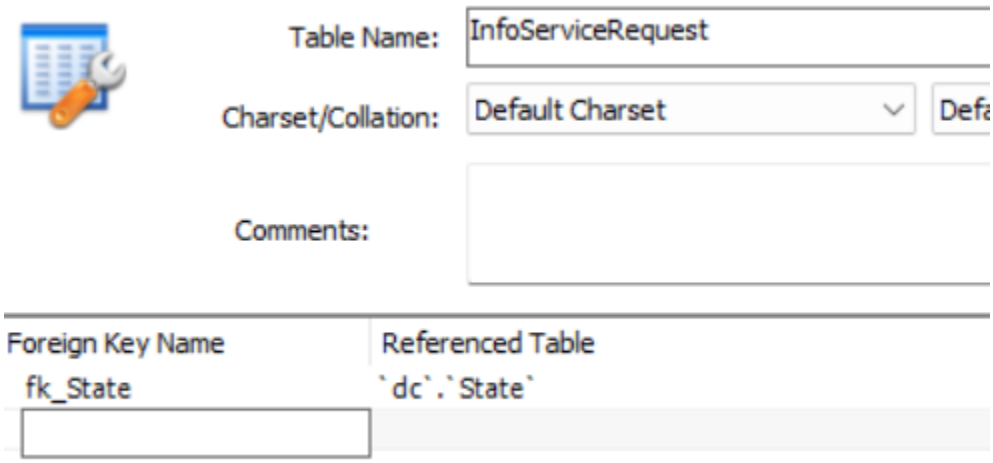
Actions Taken:

- Foreign keys and indexes were reviewed for all four tables:
    - SRT21b – Foreign Key: fk_Channel_Id_21b referencing `dc`.`Channels`. Indexes: PRIMARY (composite on Channel_Id, Mp4_File_Name, CC_Num), Created_At (INDEX), idxFTlines (FULLTEXT).

- RadioCheckin – No foreign keys. Indexes: PRIMARY (composite on Finished_at, Host_name, Station).
- InfoServiceRequest – Foreign Key: fk_State referencing `dc`.`State`. Indexes: PRIMARY (composite on lastName, firstName), fk_State_idx (INDEX).
- InfoContactRequests – No foreign keys. Indexes: PRIMARY (composite on lastName, firstName).

Result: Foreign key relationships and indexes were documented for all assigned tables. SRT21b references the Channels table and InfoServiceRequest references the State table.





2. Tests

Test Scenario 1: Confirm Table Qualifies to be Dumped

Verify that tables selected for dumping do not contain data that must be retained elsewhere.

Validation Performed:

- Tables were reviewed for size, sensitivity, and usage.
- SRT21b is a large operational table (766,198 rows) containing caption/transcription data. Due to its size and retention violations, only a structure dump was performed. A full data dump is deferred until old records are cleaned up.
- RadioCheckin, InfoServiceRequest, and InfoContactRequests are empty or contain only NULL placeholder rows. Structure dumps were confirmed appropriate.
- **Status: Complete**

Test Scenario 2: Verify Tables to be Dumped

Confirm selected tables with DigiClips before executing dumps.

Validation Performed:

- Table selection followed the Sprint 8 Planning Agreement and prior documentation.
- No critical data loss risk was identified for the empty tables.
- SRT21b requires coordination with DigiClips before any data deletion or full data dump is performed.
- **Status: Complete**

Test Scenario 3: Verify Tables to be Downloaded

Confirm that any necessary data is preserved appropriately.

Validation Performed:

- No tables required alternative data storage at this time.
- RadioCheckin, InfoServiceRequest, and InfoContactRequests are empty and do not contain data that needs to be preserved via GitHub download.
- SRT21b structure was dumped successfully. The data component will be addressed after retention cleanup is coordinated with DigiClips.
- **Status: Complete**

Test Scenario 4: Verify Age of Web Scraped Data

Ensure web-scraped data is within retention limits.

Validation Performed:

- Timestamp fields were reviewed where applicable.
- SRT21b contains Created_at and Finished_at DATETIME fields with records dating back to February 2024, which significantly exceeds the 90-day retention window. This was escalated to the DigiClips team.
- RadioCheckin, InfoServiceRequest, and InfoContactRequests are empty or contain only NULL data. No outdated web-scraped data was identified.

- **Status: Complete**

Test Scenario 5: Verify Existence of Triggers

Check the layout of each schema and verify that triggers exist under the triggers tab.

Validation Performed:

- The Triggers tab was reviewed in MySQL Workbench for all four assigned tables.
- No triggers were found on any of the assigned tables: SRT21b, RadioCheckin, InfoServiceRequest, or InfoContactRequests.
- The absence of triggers was documented for each table.
- **Status: Complete**

3. Table Structure Summary

SRT21b

- **Schema:** dc
- **Engine:** InnoDB
- **Charset/Collation:** utf8mb4 / utf8mb4_0900_ai_ci
- **Row Count:** 766,198 rows
- **Classification:** Large table
- **Columns:** Channel_Id (INT, PK, NN, UQ), Mp4_File_Name (VARCHAR(100), PK, NN, UQ), CC_Num (INT, PK, NN, UQ), Timecode (VARCHAR(32), NULL), Created_at (DATETIME, default CURRENT_TIMESTAMP), Finished_at (DATETIME, default CURRENT_TIMESTAMP), Cat_Frames (VARCHAR(2004), NULL), VTT_txt_file_name (VARCHAR(45), NULL)
- **Indexes:** PRIMARY (composite), Created_At (INDEX), idxFTlines (FULLTEXT)
- **Foreign Keys:** fk_Channel_Id_21b → `dc`.`Channels`
- **Triggers:** None
- **Retention Status:** VIOLATION – Contains records from February 2024, exceeding the 90-day retention window. Escalated to DigiClips team.

RadioCheckin

- **Schema:** dc
- **Engine:** InnoDB
- **Charset/Collation:** Default
- **Row Count:** 1 row (all NULL values – effectively empty)
- **Classification:** Small table (empty)
- **Columns:** Finished_at (DATETIME, PK, NN), Host_name (VARCHAR(45), PK, NN), Station (VARCHAR(45), PK, NN)
- **Indexes:** PRIMARY (composite)
- **Foreign Keys:** None
- **Triggers:** None
- **Retention Status:** Not applicable – table contains only NULL data.

InfoServiceRequest

- **Schema:** dc
- **Engine:** InnoDB
- **Charset/Collation:** Default
- **Row Count:** 1 row (all NULL values – effectively empty)
- **Classification:** Small table (empty)
- **Columns:** lastName (VARCHAR(45), PK, NN), firstName (VARCHAR(45), PK, NN), email (VARCHAR(35)), phone (VARCHAR(20)), cell (VARCHAR(20)), org (VARCHAR(45)), address1 (VARCHAR(50)), address2 (VARCHAR(50)), city (VARCHAR(45)), state (CHAR(2)), country (VARCHAR(45)), zipCode (VARCHAR(20)), orderType (VARCHAR(200)), markets (VARCHAR(200)), affiliates (VARCHAR(200)), keywords (VARCHAR(200)), stations

(VARCHAR(200)), startDateTime (DATETIME), finishDateTime (DATETIME), additionalDetails (VARCHAR(200))
- **Indexes:** PRIMARY (composite on lastName, firstName), fk_State_idx (INDEX)
- **Foreign Keys:** fk_State → `dc`.`State`
- **Triggers:** None
- **Retention Status:** Not applicable – table contains only NULL data. Date fields (startDateTime, finishDateTime) exist but are NULL.

InfoContactRequests

- **Schema:** dc
- **Engine:** InnoDB
- **Charset/Collation:** Default
- **Row Count:** 0 rows (confirmed empty)
- **Classification:** Small table (empty)
- **Columns:** lastName (VARCHAR(45), PK, NN), firstName (VARCHAR(45), PK, NN), email (VARCHAR(35), NULL), message (VARCHAR(500), NULL)
- **Indexes:** PRIMARY (composite on lastName, firstName)
- **Foreign Keys:** None
- **Triggers:** None
- **Retention Status:** Not applicable – table is empty and contains no date-based fields.
