Reporting Tables Implementation

Sprint 7: Sentiment_Analysis_keywords, SentimentAnlyResult, Magazines, Markets

Overview

This report explains data preservation methods used for the assigned tables.

Dumps were created in two categories based on table size, volatility, and retention rules.

```sql
SELECT
  table_name,
  table_rows
FROM information_schema.tables
WHERE table_schema = 'dc'
  AND table_name IN (
    'Sentiment_Analysis_keywords',
    'SentimentAnlyResult',
    'Markets',
    'Magazines'
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

TABLE_NAME	TABLE_ROWS
Magazines	15
Markets	2
SentimentAnlyResult	267
Sentiment_Analysis_keywords	2

Table	Size	Dump Type	Notes
Magazines	Small	Full Dump (A)	Includes structure + all data and manipulations

Markets	Small	Full Dump (A)	Includes structure + all data and manipulations
SentmentAnlyResult	Small	Full Dump (A)	Includes structure + all data and manipulations
Sentiment_Analysis_keywords	Small	Full Dump (A)	Includes structure + all data and manipulations

Retention check: All tables were checked for records older than 90 days. Any violations were flagged and will be escalated to the backend teams and sponsors.

Dump Details

<u>Dump A</u> → Small Tables

- Tables included: Sentiment_Analysis_keywords, SentimentAnlyResult, Magazines, Markets
- Export type: Structure + Data
- File names:
  - dc_data-dump_2026-02-22_Sentiment_Analysis_keywords.sql
  - dc_structure-dump_2026-02-22_Sentiment_Analysis_keywords.sql
  - dc_data-dump_2026-02-22_SentimentAnlyResult.sql
  - dc_structure-dump_2026-02-22_SentimentAnlyResult.sql
  - dc_data-dump_2026-02-22_Markets.sql
  - dc_structure-dump_2026-02-22_Markets.sql
  - dc_structure-dump_2026-02-22_Magazines.sql
  - dc_data-dump_2026-02-22_Magazines.sql
- Purpose: Provides full data for rollback, testing, and validation for smaller, stable tables.

<u>Dump B</u> → LargeTables

- Tables included: None
- Export type: Structure only (no data)
- File name:
  - none
- Purpose: Preserves table schema and indexes for large, volatile scraping tables without storing millions of rows of temporary data.

Notes:

Triggers, events, and stored procedures were excluded from the schema-only dumps because they are not required for rollback or performance testing.
Refer to sprint 3 reporting optimization documentation for a detailed explanation of table schemas, stored procedures and events.

SentimentAnlyResult

Oldest and Newest Records of SentimentAnlyResult:

```sql
SELECT
  MIN(Finished_at) AS oldest_record,
  MAX(Finished_at) AS newest_record
FROM SentimentAnlyResult;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

oldest_record	newest_record
2021-10-16	2021-11-29

- This table is not in use and hasn't been for the past over 4 years. It can be deleted according to the retention policy

Download / Excluded Data (NONE)

Some data was excluded from dumps due to size and retention rules.

These are the steps followed to identify such tables:

1. Identified data that cannot be included in SQL dumps
    a. Historical scrape data from over 90 days
    b. Large result sets that would create huge files
2. Downloaded and exported data separately”
    a. Format: csv file
3. Stored securely in:
    a. /dumps folder in Github repository
    b. Explicitly named: NONE
    c. Ensured it is accessible for future validation

Notes:
As of now, all my assigned tables are not in use.

Sentiment_Analysis_keywords was a test table that hasn’t been deleted.

Magazines and Markets are general tables and consist a list of all mentioned magazines and websites.

Trigger Checks

None of my assigned tables have triggers.

SRT Validation

None of the tables assigned to me this sprint are SRT tables.

Next Steps

- Verify that dumps restore correctly in test environments.
- Document any retention violations and escalations
- Track dumps and documentation from other teams
- Make optimization changes to the dumped tables

Summary

- Large, volatile tables (Results) → schema-only dumps
- Small, stable tables (Feeds) → full dumps

- Excluded/large data → downloaded separately, stored securely
- Documentation ensures traceability, rollback support, and compliance with retention rules
- Sentiment_Analysis_keywords can be deleted
- SentimetAnalyResult hasn’t been in use for 4 years.
